

ENCLOSURES

A protective instinct

Durability, flexibility and design are fundamental to enclosures - something we are clear about, here at Istobal. For this reason, we want to be sure that our solutions satisfy these three requirements to the full. Thus, we have built solid structures in material which is highly resistant to corrosion. Furthermore, we offer the greatest flexibility on the market, thanks to the modular concept behind the design of every part. On top of this, we guarantee that all the models are modern-looking and completely adaptable to each client's personal image. Only by doing so, have we been able to attain certification and guarantees from the corresponding organisations and regulations consulted, and thereby make our enclosures the best guarantee of protection for jet washes, rollovers and wash tunnels.

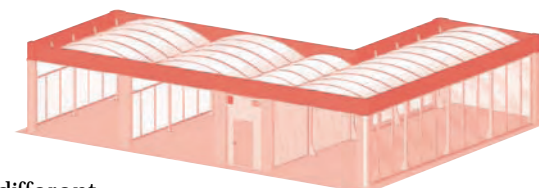

Istobal enclosures are central to guaranteeing that jet washes work correctly, whether it be one, two, three... right up to twelve bays.

Istobal enclosures are vital to guarantee a long life to rollovers.

All kinds of enclosures exist to adapt to different wash needs, there are even possibilities for combined wash tunnels, rollovers and jet washes.

Flexibility above all

Experience has shown us that there are no two spaces alike, so, at ISTOBAL we have created the most versatile enclosures on the market, in terms of function as well as composition and design. Built to protect all kinds of jet washes, roll-overs and tunnels, their modular design concept means they can be adapted to any size or space. From simple one-bay structures to large-scale enclosures built with interlocking modules. Consult our technicians, they will be happy to help you to decide the structure that best suits your needs.

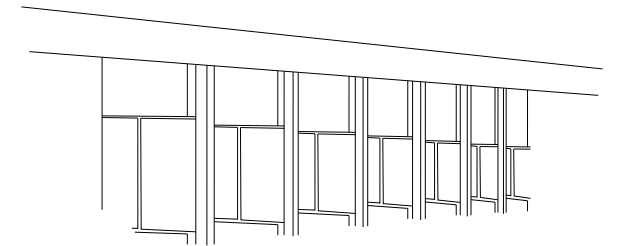

MODULAR STRUCTURES

- JET WASHES WITH VARIOUS BAYS
- JET WASHES WITH CONTROL ROOM
- ROLLOVER/WASH TUNNEL WITH VARIOUS BAYS
- ROLLOVER/TUNNEL WITH CONTROL ROOM
- MIXED SET-UPS (JET WASHES AND ROLLOVERS/TUNNELS)

To be sure that our enclosures are always in perfect condition, Istobal uses only materials which are highly resistant to corrosion. Among these, aluminium, hot-dip galvanised steel and stainless steel nuts and bolts to keep maintenance at a minimum and guarantee a long-lasting modular structure.

**HIGHLY
RESISTANT
STRUCTURE**

Customising is a cornerstone of our philosophy here at Istobal. This applies equally to our enclosures, which are highly adaptable. In materials for the partition walls, there is a choice of laminated glass, cellular polycarbonate or PVC. The finish on canopies and enclosures is also open to a wide range of possibilities for personalising, with around twenty colours in addition to the corporate colours of the main oil companies.

THE WIDER THE RANGE, THE GREATER THE POSSIBILITIES

RANGE	Application	Bay Dimensions	
		Length m.	Width m.
MA	FOR VACUUMS	4.30	4.50
MB	FOR JET WASHES	5.35	4.50 or 4,80
MC	FOR JET WASHES	6.40	4.50 or 4,80
MP	FOR ROLLOVERS AND TUNNELS	9.60 and +	4.50 or 4,80

ISTOBAL, S.A., reserves the right to undertake any changes it may deem necessary for product improvement.
